QUALITY ASSURANCE “QA” SIG MEETING

JOIN US! (FREE FOR NPU STUDENTS)

Topic: "A Smarter Approach to Performance Testing / The Marriage of Operations and Apps Dev"

Are your performance tests providing all the analytical information you need to enable you to pinpoint bottlenecks and tune your applications?

Does Application Development, QA/Test and IT Operations work hand in hand on ensuring application performance and reliability?

Compuware has a sophisticated approach to performance testing, diagnosis and tuning which provides an accurate estimate of application load as well as in-depth analytical information to help find and eliminate performance bottlenecks. We will demonstrate our approach and the tools we provide to address the needs of developers, QA/Test engineers, and IT operations staff. Specifically, we will highlight our QA Center Performance Edition products for load and performance testing and Application Vantage for thread-level application monitoring and tuning. When these tools are used throughout the development life cycle, IT will be able to architect their applications with performance in mind.

Information: Tues March 1st 6:30-9pm

Location:

Northwestern Polytechnic University (NPU)
117 Fourier Ave; Auditorium
Fremont, CA 94539

*event is FREE TO NPU students, please **register** for head count www.ebig.org

Agenda:

6:30-7:00 Networking, Registration, Pizza & Soda
7:00-7:15 Announcements, Introductions
7:15-8:30 Presentation
8:30-9:00 Q&A
